12	Anonymous	The interconnected of Policies.... for example, reduction in water use -> reduction in green spaces -> reduction in quality of life while outdoors -> increased indoor use -> increased energy use -> increased emissions. Hence, topics could consider the impacts of policy options on existing policies. Maybe not a policy to ban the use of potable water to irrigate plants, but perhaps a policy to provide suitable water for irrigation or one that supports diversified sources of potable water. The heat island effect is not compatible with a sustainable city.
